When calling a C function from C++ the function name will be mangled unless you turn it off. Name mangling is turned off with the extern "C" syntax. If you want to create a C function in C++ you must wrap it with the above syntax. If you want to call a C function in a C library from C++ you must wrap in the above syntax.

The C++-style cast syntax is verbose and cumbersome. In general, do not use C-style casts. Instead, use these C++-style casts when explicit type conversion is necessary. Use brace initialization to convert arithmetic types (e.g., int64{x}). This is the safest approach because code will not compile if conversion can result in information loss.

Coding style is all about readability and maintainability using commonly available tools. The limit on the length of lines is 80 columns and this is a strongly preferred limit. Statements longer than 80 columns will be broken into sensible chunks, unless exceeding 80 columns significantly increases readability and does not hide information.
