Epidemiology. It is estimated that 70–80% of pregnant women experience NVP [1]. In the United States and Canada this translates to approximately 4,000,000 and 350,000 women who are affected each year, respectively [2]. NVP is found more often in Western countries and urban populations and is rare among Africans, Native Americans, Eskimos, and most Asian populations [3].

Ref. discusses the main challenges in developing epidemic models for COVID-19. From highlighting the differences between “peace” and “war” modeling due to lack of data and a fluid landscape of knowledge about the virus under study in the middle of a pandemic, to the importance and challenges of considering super-spreading events.

Non-pharmaceutical interventions during the COVID-19 ...

Melanoma, also redundantly known as malignant melanoma, is a type of skin cancer that develops from the pigment-producing cells known as melanocytes. Melanomas typically occur in the skin, but may rarely occur in the mouth, intestines, or eye (uveal melanoma). In women, they most commonly occur on the legs, while in men, they most commonly occur on the back.
