Supporting the results of experimental studies with children, there is intriguing evidence that exercise in a cognitively-engaging context has a stronger impact on the brain. Thus, an interesting hypothesis is that exercise that impacts EF through multiple pathways would have a stronger effect than exercise that works through fewer pathways.

Effects of Physical Activity on Children's Executive ...

Research has shown that children with special health care needs (CSHCN) are often accompanied by substantial unmet health care needs (UHCNs). To address the UHCNs of children and their families, the concept of a medical home (MH) has emerged as a means of providing a family-centered and community-based health care service delivery model.

In psychology, the Stroop effect is the delay in reaction time between congruent and incongruent stimuli.. The effect has been used to create a psychological test (the Stroop test) that is widely used in clinical practice and investigation.. A basic task that demonstrates this effect occurs when there is a mismatch between the name of a color (e.g., "blue", "green", or "red") and the color it ...
