The system consists of two crude oil distillation units: the atmospheric distillation unit (ADU) and the vacuum distillation unit (VDU), two crude oil furnaces and a heat exchanger network (HEN). The HEN is not shown, but its effect via utilizing high-temperature product streams to preheat the crude oil is analyzed.

Natural medicines were the only option for the prevention and treatment of human diseases for thousands of years. Natural products are important sources for drug development. The amounts of bioactive natural products in natural medicines are always fairly low. Today, it is very crucial to develop effective and selective methods for the extraction and isolation of those bioactive natural products.

Limonene, (+)- is an oral dietary supplement containing a natural cyclic monoterpene, and a major component of the oil extracted from citrus peels, with potential chemopreventive and antineoplastic activities. Upon oral administration, D-limonene activates aldehyde dehydrogenase 3A1 (ALDH3A1), thereby decreasing aldehyde level. This may protect salivary stem/progenitor cells (SSPCs) from toxic ...

Butane has a high research octane number (about 94), and it is a good substitute for Pb in gasoline blending. The addition of butane increases the “front end” volatility of a gasoline. High fuel volatility increases automotive evaporative emissions and increases vapor losses from fuel tanks by displacement during refueling (Stebar et al. 1985).

Subaru's FB20 was a 2.0-litre horizontally-opposed (or 'boxer') four-cylinder petrol engine. Effectively replacing the EJ204 engine, the FB20 engine was a member of Subaru's third generation 'FB' boxer engine family which also included the FB25, FA20D, FA20E and FA20F engines. The FB20 engine first offered in Australia in 2012 Subaru GP/GJ Impreza.

The temperature of output in the last reactor is set to be higher than 370 °C. This stream has a very high heating capacity and is therefore used for steam production in a steam generator. The obtained steam is then used for evaporation of the ethanol feed. The temperature of the reaction mixture is decreased to 144 °C in the steam generator.

Industrial wastewater treatment describes the processes used for treating wastewater that is produced by industries as an undesirable by-product. After treatment, the treated industrial wastewater (or effluent) may be reused or released to a sanitary sewer or to a surface water in the environment. Some industrial facilities generate wastewater that can be treated in sewage treatment plants.
