A wonderful strategy for placing the decimal is to use estimation. For example if the question is $49.2 + 20.1$, the answer without the decimal is 693. Estimate by rounding 49.2 to 50 and 20.1 to 20. $50 + 20 = 70$. The decimal in 693 must be placed between the 9 and the 3 as in 69.3 to make the number close to the estimate of 70.

So, our Decimal System lets us write numbers as large or as small as we want, using the decimal point. Digits can be placed to the left or right of a decimal point, to show values greater than one or less than one. The decimal point is the most important part of a Decimal Number. Without it we are lost, and don't know what each position means.

Place the decimal point in your answer so that your answer has the same number of digits after the decimal point. Even if the last digit in the answer is 0, you still need to count this as a digit when placing the decimal point in a multiplication problem. After the decimal point is in place, however, you can drop trailing zeros.
