Advances in LEO satellites have become possible due to some significant improvements in electronic design, components, and power consumption. Such advances include more advanced microwave receivers and more sensitive low- noise amplifiers and receivers which can work with lower field strengths, reducing the need for

Future Trends**

The history of radar (where radar stands for radio detection and ranging) started with experiments by Heinrich Hertz in the late 19th century that showed that radio waves were reflected by metallic objects. This possibility was suggested in James Clerk Maxwell's
