Neurodevelopmental Effects of Antiepileptic Drugs (MONEAD) Why is this study important? Most Women with epilepsy have normal pregnancies, but appear to be at risk for problems during pregnancy (e.g., seizures, change in medications, depression, c-sections) and adverse outcomes in their children (e.g., thinking or behavioral problems).

MONEAD Study - Home

Abstract. Antiepileptic drugs (AEDs) are routinely prescribed for the management of a variety of neurologic and psychiatric conditions, including epilepsy and epilepsy syndromes. Physiologic changes due to aging, pregnancy, nutritional status, drug interactions, and diseases (ie, those involving liver and kidney function) can affect pharmacokinetics of AEDs.

Antiepileptic Drugs and Adverse Skin Reactions: An Update

The FDA today announced that it will require makers of epilepsy drugs to add a warning about increased risk of suicidal thoughts and behaviors to the products' prescribing information or labeling.

FDA Orders Suicide Risk Warning for Epilepsy Drugs

Background: Several antiepileptic drugs are photosensitizing; however, it is not known whether this confers an increased risk of skin cancer. Objective: To examine the association between common antiepileptic drugs and basal cell carcinoma, squamous cell carcinoma (SCC), and malignant melanoma. Methods: We conducted a nested case-control study identifying skin cancer patients in Denmark from ...
