Introductory questions. Signalling started with the idea of asymmetric information (a deviation from perfect information), which relates to the fact that, in some economic transactions, inequalities exist in the normal market for the exchange of goods and services.In his seminal 1973 article, Michael Spence proposed that two parties could get around the problem of asymmetric information by ...

Signalling (economics) - Wikipedia
Economics is the study of choice, investigating the choices of consumers and corporations, groups and governments, networks and nations. It plays a part in every aspect of modern life, using scientific methods to develop theoretical models of behaviour and testing intuition with empirical analysis of markets, institutions and public policy.

Economics BSc (UCAS L100) - Warwick
The Modigliani–Miller theorem suggests that the puzzle can (only) be explained by some combination of taxes, bankruptcy costs, market inefficiency (including that due to investor psychology), and asymmetric information.
