Electric current provides a measure of how fast charge moves between two points on a circuit. The electric current diminishes in value as charge progresses to locations further and further from the + terminal of the battery. The electric current in a circuit will increase as the electric potential impressed across a circuit is increased.

SI unit of electric current is ampere. One ampere of current is that current which flow when one coulomb of electric charge flowing through a particular area of cross-section of the conductor in one second, i.e.  $1A = 1 Cs^{-1}$ . The direction of conventional current is A to B, i.e. opposite to the direction of flow of electrons.
