Types of Firewall. Firewalls are generally of two types: Host-based and Network-based. Host-based Firewalls : Host-based firewall is installed on each network node which controls each incoming and outgoing packet. It is a software application or suite of applications, comes as a part of the operating system.

### **Introduction of Firewall in Computer Network - GeeksforGeeks**

Firewall appliances may also offer non firewall functionality, such as DHCP or VPN services. Host-based firewalls are deployed directly on the host itself to control network traffic or other computing resources. This can be a daemon or service as a part of the operating system or an agent application for protection.
