Hedge Fund Performance. Speedy recovery overshadowed by record lag to the S&P 500: The HFM global composite index recovered from a dismal Q1 to achieve a near-term record gain in Q2, up 8.4% as global stock markets rebounded and end-of-quarter macro data indicated a faster than expected global recovery. However, with the global benchmark trailing the S&P 500 by almost 12 percentage points - the biggest quarterly lag to date - there was cause for only restrained celebration.

This chapter examines the performance of portfolios of hedge funds when fund selection is based on the rank of a funds' alpha rather than on the estimated value of the alpha. It presents four different factor models to estimate the alpha of individual hedge funds.

Funds of Hedge Funds | ScienceDirect

These biases are documented in Brown, Goetzmann, Ibbotson, and Ross (1992) using mutual funds as subjects. The organization structure of hedge funds, as private and often offshore vehicles, makes data collection a much more onerous task, amplifying the impact of performance measurement biases. This paper reviews these biases in hedge funds.
