Anconeus muscle (musculus anconeus) The anconeus is a small, triangular muscle of the arm.It is located at the posterior aspect of the elbow, extending from the distal humerus to the proximal ulna.. The anconeus muscle belongs to the superficial extensor compartment, along with the brachioradialis, extensor carpi radialis longus, extensor carpi radialis brevis, extensor digitorum, extensor ...

Anconeus muscle: Origin, insertion, innervation, function ...
In anatomy, a process (Latin: processus) is a projection or outgrowth of tissue from a larger body. For instance, in a vertebra, a process may serve for muscle attachment and leverage (as in the case of the transverse and spinous processes), or to fit (forming a synovial joint), with another vertebra (as in the case of the articular processes). The word is used even at the microanatomic level ...
