103 Statistics Quizzes Online, Trivia, Questions & Answers ...

The binomial distribution is a discrete probability distribution. It describes the outcome of n independent trials in an experiment. Each trial is assumed to have only two outcomes, either success or failure. If the probability of a successful trial is p, then the probability of having x successful outcomes in an experiment of n independent trials is as follows.

Binomial Distribution | R Tutorial

rcorr(x, type="pearson") # type can be pearson or spearman Here x is a data frame, and rcorr returns every correlation which it is possible to form from the "x" data frame. Or you could calculate the statistic yourself:
